## Your IQ Score

**148**

**YOUR IQ SCORE**

Such score is attained by approximately

**.1 percent**  
of the general population

### CURRENT BMI IQ SCORES CLASSIFICATION (September 2014)

|                  |               |
|------------------|---------------|
| <b>Above 144</b> | Highly Gifted |
| <b>130 - 144</b> | Gifted        |
| <b>115 - 129</b> | Above Average |
| <b>85 - 114</b>  | Average       |
| <b>70 - 84</b>   | Below Average |
| <b>Below 70</b>  | Lower Extreme |

## 02 / Introduction

### About the BMI Certified IQ Test

WHAT THE IQ TEST MEASURES  
HOW YOUR SCORE IS CALCULATED

#### WHAT THE IQ TEST MEASURES

The BMI Certified IQ Test is a highly precise tool designed to accurately measure general intelligence in online environments.

The BMI Certified IQ Test, apart from accurately measuring your General Intelligence, has been structured in such a way to also provide meaningful insights about your performance in various, distinct areas of intelligence, revealing your key strengths or weaknesses and identifying potential opportunities for improvement.

The 20 questions you have answered have been specifically designed to measure the following five aspects of human intelligence: **Visual Perception**, **Abstract Reasoning**, **Pattern Recognition**, **Spatial Orientation** and **Analytical Thinking**

## 02/ Introduction

### About the BMI Certified IQ Test

IQ Scores Distribution  
In General Population

|           |      |            |      |
|-----------|------|------------|------|
| Below 55: | 0.1% | 100 - 114: | 34%  |
| 55 - 69:  | 1.9% | 115 - 129: | 14%  |
| 70 - 84:  | 14%  | 130 - 144: | 1.9% |
| 85 - 99:  | 34%  | Above 144: | 0.1% |

*The average IQ Score is 100. Approximately 68% of the general population attains an IQ Score within the range of 85 to 115.*

## HOW YOUR SCORE IS CALCULATED

Once you have answered the IQ Test questions, your results are compared with data from other participants in your age group who have already taken the test and then a normalized score is calculated.

Normalizing means **the average IQ score is 100**. Your score will show where you stand compared to other peers in your age group who have taken the test.

IQ scores follow a normal distribution of statistical data. Approximately 95% of the world's population have scores within two standard deviations (SD) of the mean (average IQ score), meaning that 95% of the population stand within a range of 70 to 130, and 98% are below 131.

IQ points are not percentage points. While one standard deviation is 15 points, and two SDs are 30 points, and so on, this does not imply that mental ability is linearly related to IQ, such that IQ 50 means half the cognitive ability of IQ 100.

## Assessment & Analysis

### Visual Perception

ABOUT  
STATISTICS  
PERFORMANCE

#### ABOUT

**Visual Perception** is the visual - cognitive ability which allows us to organize, process and interpret visual information input so, that we can derive understanding and meaning from what we are experiencing.

Your visual perception skills evaluation indicates how sharp is your ability to recognize even the slightest changes in forms and shapes of objects and how accurately you can determine similarities or differences based on size, colour or dimensions.

Visual perception is a key aspect of human intelligence and a core skill regarding the learning process. It is believed that people who have a well developed visual perception tend to be *better* and *faster* learners.

#### STATISTICS

## Assessment & Analysis

### Abstract Reasoning

ABOUT  
STATISTICS  
PERFORMANCE

#### ABOUT

**Abstract Reasoning** is the ability to process abstract ideas and understand new concepts without relying on prior acquired knowledge.

The “Abstract Reasoning” set of questions evaluates your General Intelligence potential without allowing factors such as your educational level, social background or life experience to interfere with the results.

Abstract Reasoning questions are designed to measure your “fluid intelligence”, meaning your ability to quickly identify logical patterns, trends and rules when you are processing new information and apply this knowledge to solve complex problems.

Research has shown that abstract reasoning assessment has the highest precision rate for predicting potential success in a future job placement and is used by many HR departments during candidates screening process.

#### STATISTICS

## Assessment & Analysis

### Pattern Recognition

ABOUT  
STATISTICS  
PERFORMANCE

#### ABOUT

**Pattern Recognition** refers to the process of recognizing, identifying and categorizing complex arrangements of sensory stimuli into organised schemes in a way that facilitates memory storage and retrieval.

It is a spontaneous and automatic process that defines your ability to recognize order in chaotic environments. Pattern recognition is considered to be exceptionally linked to your General Intelligence level since it is determinant of your capacity to think logically and your ability to recognize and make sense of logical sequences

“Pattern Recognition” set of questions is designed to measure how quickly and easily you are able to recognize underlying mechanics of different situations and to identify certain connections between things.

#### STATISTICS

**1.3** Score distribution in “Pattern Recognition” set of questions

|        |               |               |
|--------|---------------|---------------|
| SCORES | 1-2 pts (12%) | 6-7 pts (19%) |

## Assessment & Analysis

### Analytical Thinking

ABOUT  
STATISTICS  
PERFORMANCE

#### ABOUT

**Analytical Thinking** is the capacity to break down available information into smaller parts, and then evaluate and weigh-up those parts in order to form logical solutions to problems or make sensible decisions based on evidence.

Analytical thinking is considered to have the highest correlation with both problem identification and problem solving capacity. Your analytical thinking skills determine how quickly and efficiently you can identify problems and work out appropriate solutions.

Your analytical thinking assessment score indicates how efficiently you are able to **analyze information** and **make informed decisions**. Both these cognitive skills are considered crucial in academic, professional and personal success.

#### STATISTICS

1.4 Score distribution in “Analytical thinking” set of questions

|        |               |               |
|--------|---------------|---------------|
| SCORES | 1-2 pts (12%) | 6-7 pts (23%) |
|        | 3-5 pts (57%) | 8 pts (8%)    |

## Assessment & Analysis

### Spatial Orientation

ABOUT  
STATISTICS  
PERFORMANCE

#### ABOUT

**Spatial Orientation** refers to the cognitive ability which allows you to understand spatial relations, meaning the ability to recognize and visualize the orientation of objects in space and make sense of their multiple relationships in a given environment.

The set of questions related to your Spatial Orientation skills has been designed to assess the level of clarity with which you perceive space and the objects' positions or movements in it.

In this sense Spatial Orientation set of questions tests your “raw intelligence”, meaning cognitive skills which are not relying on prior acquired knowledge, and thus your performance in this assessment is a key determinant of your General Intelligence.

#### STATISTICS

1.5 Score distribution in “Spatial Orientation” set of questions

|        |               |               |
|--------|---------------|---------------|
| SCORES | 1-2 pts (11%) | 6-7 pts (24%) |
|        | 3-5 pts (61%) | 8 pts (4%)    |
